

5. Delivery SLAs

Delivery Service Level Agreements (SLAs) define expected delivery ranges after an order is confirmed and released for fulfillment. An SLA is an operational target and does not mean that every parcel is guaranteed to arrive at the exact end of the stated range.

5.1 Domestic Delivery SLA

Service	Processing target	Delivery target	Typical total
Standard	0–2 business days	2–5 business days	2–7 business days
Express	0–1 business day	1–2 business days	1–3 business days
Priority metro	Same/next business day	1 business day	1–2 business days
Large-item delivery	1–3 business days	3–7 business days	4–10 business days

Business days exclude weekends and configured public holidays. Weather events, carrier disruptions, customs processing, remote-area restrictions, and customer-requested delivery changes can extend the operational timeline.

5.2 Delivery Status Definitions

Order confirmed means payment and order validation have succeeded.

Processing means the order is being prepared but has not necessarily been handed to the carrier.

Shipped/in transit means the parcel has entered the carrier network.

Out for delivery means the carrier has assigned the parcel to a delivery route.

Delivered means the carrier reports a successful delivery event.

Delivery exception means a carrier or operational issue is preventing normal progress.

5.3 Late Delivery

A customer should normally be treated as experiencing a late delivery when the current date exceeds the applicable promised delivery range without an approved exception.

For standard domestic parcels, support should first inspect tracking data. If there has been no carrier scan for 48 hours while the parcel is in transit, the support agent may open a carrier investigation.

A delayed parcel should not automatically be declared lost. The lost-package workflow requires the applicable investigation threshold to be reached.
