

6. Reverse-Pickup Eligibility

Reverse pickup is the process by which Nimbus Commerce or its logistics partner collects an approved return from the customer's address.

6.1 Eligibility

Reverse pickup is normally available for: - domestic clothing and footwear returns, - electronics eligible for return, - appliances, - furniture, - qualifying seller-fulfilled items, - damaged-item claims, - incorrect-item claims.

Availability depends on the customer's postal area, carrier coverage, parcel dimensions, product category, and reason for return.

6.2 Pickup Requirements

The customer must package the item according to the return instructions. The product should contain required accessories and documentation. For large items, the customer may be required to make the product accessible to the pickup team.

A customer should not hand over a different item because it has a similar appearance. Serial-numbered products are checked against the original order.

6.3 Failed Pickup

If a pickup fails because the carrier did not arrive, the customer was unavailable, or packaging was not ready, support should record the reason. A carrier-attributable failed pickup can normally be rescheduled without an additional charge.

Repeated customer-attributable failures may result in a different return method, such as a drop-off label.

6.4 Remote Areas

Reverse pickup may be unavailable in remote or carrier-restricted areas. In such cases Nimbus Commerce may provide a drop-off label, arrange an alternative carrier, or perform a manual support review.
