

14. Customer-Support Escalation Matrix

The escalation matrix determines which team handles an issue when frontline support cannot resolve it.

Issue	Level 1	Level 2	Level 3
General return question	Customer Support	Returns Team	Operations Manager
Refund missing	Customer Support	Payments Team	Finance Operations
COD refund delayed	Customer Support	COD Payments	Finance Operations
Delivery delay	Customer Support	Logistics	Logistics Manager
Lost parcel	Customer Support	Carrier Claims	Logistics Manager
Damaged item	Customer Support	Claims Team	Operations Manager
Warranty dispute	Customer Support	Warranty Team	Vendor/Category Manager
Payment failure	Customer Support	Payments	Payments Manager
Duplicate charge	Customer Support	Payments	Finance Operations
Fraud/security concern	Customer Support	Risk Team	Risk Manager
Privacy request	Customer Support	Privacy Team	Privacy Officer
VIP complaint	Customer Support	Priority Support	Customer Experience Manager
Legal/compliance request	Customer Support	Compliance	Legal/Compliance
Repeated unresolved complaint	Customer Support	Escalations	Customer Experience Manager

14.1 Priority Levels

P1 — Critical: Safety issue, suspected major security breach, systemic payment incident, or regulatory escalation.

P2 — High: Customer unable to receive a high-value product, confirmed duplicate payment, serious delivery failure, or repeated unresolved case.

P3 — Standard: Ordinary return, exchange, delivery, refund, and account issues.

P4 — Informational: General policy questions and low-impact requests.

14.2 Escalation Information

Every escalation should include: - customer/order identifier, - issue category, - concise problem description, - relevant timestamps, - actions already attempted, - supporting evidence, - customer expectation, - urgency/priority, - policy rule involved.

Agents should avoid escalating a case without useful context because incomplete escalation records increase resolution time.
