

30. Scenario-Based Policy Examples

Scenario A — Clothing return on day 28

Customer received a jacket 28 calendar days ago and wants a refund because the size is wrong. The jacket is unworn and tags remain attached.

Decision: Eligible for a standard clothing return. The customer may request a refund or size exchange, subject to inventory and the normal return process.

Scenario B — Laptop defect after 40 days

Customer reports that a laptop stopped charging 40 days after delivery.

Decision: The 14-day standard electronics return window has passed, but the laptop is within its 24-month standard warranty period. Route through warranty diagnostics.

Scenario C — COD refund marked processed

Customer returned shoes, received an approved refund, and says the money has not appeared after two days.

Decision: Two business days may still be within the expected banking period. Verify the refund initiation timestamp and transaction reference before escalating.

Scenario D — Order shipped but customer wants cancellation

The customer requests cancellation after receiving a shipment notification.

Decision: Cancellation is normally unavailable after shipment. Explain the return process and avoid promising that the carrier can stop delivery.

Scenario E — Wrong color delivered

Customer ordered black headphones and received white headphones.

Decision: Treat as a fulfillment error. Arrange the approved return/pickup and replacement or refund. Customer should not bear return shipping for a confirmed Nimbus Commerce error.

Scenario F — Parcel split across warehouses

Customer ordered four products and received only two. The order page shows two active shipments.

Decision: Do not classify the products as missing yet. Explain that the order is split and provide the tracking information for the remaining shipment.

Scenario G — International battery shipment

Customer wants to ship a lithium-battery product to a destination where the carrier does not accept that battery classification.

Decision: The shipment is restricted. Do not recommend bypassing the restriction. Offer an eligible alternative if one exists.

Scenario H — Repeated damaged-item claims

A customer has submitted several high-value damage claims over a short period.

Decision: Do not accuse the customer of fraud. Follow the normal claim workflow and escalate the pattern to Risk when the established review threshold is reached.

Scenario I — Size exchange unavailable

Customer wants to exchange a shirt for XL, but XL is out of stock.

Decision: Offer another eligible size, store credit, or refund according to the customer's available options.

Scenario J — Payment failed but bank shows a charge

Customer's order shows payment failed, but the bank displays a pending amount.

Decision: Check whether the amount is an authorization hold or successful capture. Do not automatically classify it as a duplicate charge.
