

31. Knowledge-Base Retrieval Notes

This section exists specifically for AI retrieval and evaluation.

31.1 Important Retrieval Entities

Queries may refer to the same concept using different language.

Concept	Possible query terms
Return window	return period, return days, how long can I return
COD refund	cash on delivery refund, COD money back, cash refund
Delivery SLA	delivery time, shipping time, late delivery, ETA
Reverse pickup	return pickup, collection, courier pickup
Warranty	guarantee, defective product, repair coverage
Cancellation	cancel order, stop order, undo purchase
Loyalty points	rewards, points, reward balance
Payment failure	card declined, payment failed, retry payment
Size exchange	wrong size, change size, exchange size
Damaged item	broken product, transit damage, damaged parcel
International shipping	overseas delivery, customs, export restrictions
Escalation	supervisor, complaint escalation, unresolved issue

31.2 Retrieval-Quality Requirements

The RAG system should retrieve both broad policy sections and specific category rules.

For example, the query:

“Can I return my laptop after 20 days?”

should retrieve the electronics return section rather than only the general return section.

The query:

“My COD refund was processed yesterday, when will I see it?”

should retrieve both the COD refund timeline and the distinction between refund initiation and bank posting.

The query:

“My order is late and has not moved for two days”

should retrieve delivery SLA, tracking-status definitions, and carrier-investigation rules.

31.3 Conflicting-Rule Resolution

If retrieval returns several rules, the agent should prefer: 1. order-specific rule, 2. product-specific rule, 3. promotion-specific rule, 4. seller-specific rule, 5. regional/destination rule, 6. general Nimbus policy.

The agent should not combine incompatible rules into an invented compromise.
