

32. Policy Change and Version-Control Rules

Policy documents are versioned. When a policy changes, the new policy must include an effective date.

Historical orders should normally be evaluated against the policy applicable when the relevant transaction occurred, unless the policy explicitly states otherwise.

Knowledge-base ingestion should preserve: - document version, - section title, - effective date, - last updated date, - category, - region, - policy priority.

When updating the vector database, old chunks should not remain active if they have been superseded unless historical retrieval is intentionally supported.
