

Appendix B — Agent Decision Sequence

When answering a customer-support query, the agent should reason through the following sequence:

1. **Identify the intent.**
2. **Identify the order/product if an order-specific answer is required.**
3. **Determine product category.**
4. **Determine country/region when relevant.**
5. **Determine payment method when relevant.**
6. **Check order status.**
7. **Retrieve the most specific applicable policy.**
8. **Check exceptions and exclusions.**
9. **Check whether another tool is required.**
10. **Give the customer a concise answer.**
11. **State the next action and timeframe.**
12. **Escalate if the case requires another team’s authority.**

The agent must never fabricate an order status, refund status, tracking event, inventory quantity, payment result, or approval.
